Motivation & context

We are building on an evidence ...

Whys and wherefores

Whys and wherefores

This is not the end ... this is the beginning

- **fundamental** , **composite** , **mixed** ?
- spinless ? CP -even ?
- single or multiple ? – heavier , lighter , hidden partners ?
- perturbative or strongly coupled ?
- How does it confront with naturalness , with Λ_{DE} ?

Whys and wherefores

This is not the end ... this is the beginning

- **fundamental** , **composite** , **mixed** ?

The quest for multiscalar sectors

THEORY

♠ coupling deviations

$$g_{xxH} = g_{xxH}^{\text{SM}}(1 + \Delta_x)$$

♠ novel states

$$H^0, H^\pm, A^0, H_{\text{DM}}, \dots$$

OBSERVATIONS

♠ Modified h^0 production & decay

$$pp(\text{GF, VBF}) \rightarrow h \rightarrow \gamma\gamma, \tau\tau, VV^*$$

♠ Direct H^{BSM} production

$$pp(\text{GF, VBF}) \rightarrow A^0 \rightarrow t\bar{t}, h^0 Z^0$$

The quest for multiscalar sectors

THEORY

♠ coupling deviations

$$g_{xxH} = g_{xxH}^{\text{SM}} (1 + \Delta_x)$$

♠ novel states

$$H^0, H^\pm, A^0, H_{\text{DM}}, \dots$$

OBSERVATIONS

♠ Modified h^0 production & decay

$$pp(\text{GF, VBF}) \rightarrow h \rightarrow \gamma\gamma, \tau\tau, VV^*$$

♠ Direct H^{BSM} production

$$pp(\text{GF, VBF}) \rightarrow A^0 \rightarrow t\bar{t}, h^0 Z^0$$

$$\mu_i^p \equiv \frac{\sigma_p \times BR_i}{\sigma_p^{\text{SM}} \times BR_i^{\text{SM}}} = \left(\frac{\sigma_p}{\sigma_p^{\text{SM}}} \right) \left(\frac{\Gamma_i}{\Gamma_i^{\text{SM}}} \right) \left(\frac{\Gamma_H^{\text{SM}}}{\Gamma_H} \right) \mu_i^p \equiv 1 + \delta \mu_i^p$$

The quest for multiscalar sectors

BSM models

- Adding one $SU(2)_L$ **singlet** : dark singlet, real(complex) singlet, Higgs portal ...
- Adding one $SU(2)_L$ **doublet** : Inert 2HDM, Types I - II 2HDM; leptophobic & flipped, vectorphobic; Type III; aligned ...)
- Adding one $SU(2)_L$ **triplet**:
- **Parameterizing strongly interacting EWSB**: SILH, MCHM ...

The quest for multiscalar sectors

BSM models

- Adding one $SU(2)_L$ **singlet** : dark singlet, real(complex) singlet, Higgs portal ...
- Adding one $SU(2)_L$ **doublet** : Inert 2HDM, Types I - II 2HDM; leptophobic & flipped, vectorphobic; Type III; aligned ...)
- Adding one $SU(2)_L$ **triplet**:
- **Parameterizing strongly interacting EWSB**: SILH, MCHM ...

$$\mathcal{L}_{\text{SM}} \longrightarrow \mathcal{L}[g'_{\text{SM}}, g_{\text{BSM}}, \phi_{\text{SM}}, \phi_{\text{BSM}}]$$

The quest for multiscalar sectors

BSM models

- Adding one $SU(2)_L$ **singlet** : dark singlet, real(complex) singlet, Higgs portal ...
- Adding one $SU(2)_L$ **doublet** : Inert 2HDM, Types I - II 2HDM; leptophobic & flipped, vectorphobic; Type III; aligned ...)
- Adding one $SU(2)_L$ **triplet**:

$$\mathcal{L}_{\text{SM}} \longrightarrow \mathcal{L}[g'_{\text{SM}}, g_{\text{BSM}}, \phi_{\text{SM}}, \phi_{\text{BSM}}]$$

BSM patterns

signal strength deviations

♠ **mixing**

♠ $\Delta_x^{\text{tree}}, \Delta_x^{\text{loop}}$

♠ **new charged/colored states**

♠ Δ_x^{loop}

♠ **degenerate states**

♠ $\Delta_\phi \rightarrow \Delta_{h^0} + \Delta_{H^0}$

♠ **hidden sectors**

♠ Γ_{inv}

Heavy scalars: predictions, tools & searches

New signatures

HEAVY SCALARS

Deviations from SM

Manifold onworking directions @ CP3

- Automated & improved predictions for loop-induced channels :
[Hespel, Maltoni, Vryonidou]
- NLO predictions for EFT's: [Demartini, Maltoni]
- S-B Interference & finite Γ effects: [Buarque Franzosi, Frixione, DLV, Maltoni, Zhang]
- Direct searches : $pp \rightarrow H^0 \rightarrow A^0(b\bar{b}, \tau\bar{\tau})Z^0$ [Delaere, Castello, Caudron, du Pree; Bruno, Jez, Perrini, Quertenmont]

Take-home ideas

Multiscalars into context

- Building on an evidence – 126 GeV resonance with SM-like decays
- Underpinning its identity – mass – quantum numbers – interactions
- Back to basics: – single or multiple ? fundamental or composite ?
weakly or strongly coupled ? what about its mass ? what about its VEV ?
