

Detection of B-modes by BICEP2

Sorry for the ugly slides
this talk has been made in 2 hours

Louvain-la-Neuve, 26/03/2014

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy
- ❖ BICEP experiment: JPL's bolometers trader
- ❖ To be kept in mind
- ❖ Compared to Planck?
- ❖ BICEP polarization maps
- ❖ E and B-modes map
- ❖ Why?
- ❖ Angular power spectra
- ❖ The likelihood is a bit funny...

Implication for slow-roll
single field inflation

BICEP2 results

BICEP experiment: a “Get Lucky” strategy

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy

- ❖ BICEP experiment: JPL's bolometers trader

- ❖ To be kept in mind

- ❖ Compared to Planck?

- ❖ BICEP polarization maps

- ❖ E and B modes map

- ❖ Why?

- ❖ Angular power spectra

- ❖ The likelihood is a bit funny...

- Implication for slow-roll single field inflation

- Dedicated to an unprobable detection of a very particular signal
curl polarization of the CMB **anisotropies** on **large** angular scales
- Look **only** in the cleanest spot in the sky from the cleanest place on earth

BICEP experiment: JPL's bolometers trader

BICEP2 results

- ❖ BICEP experiment: a "Get Lucky" strategy
- ❖ BICEP experiment: JPL's bolometers trader
- ❖ To be kept in mind
- ❖ Compared to Planck?
- ❖ BICEP polarization maps
- ❖ E and B modes map
- ❖ Why?
- ❖ Angular power spectra
- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

- To get high sensitivity, increase their number (by shit a lot!)

- 512 superconducting bolometers sensitive to polarization (TES)

To be kept in mind

BICEP2 results

- ❖ BICEP experiment: a "Get Lucky" strategy
- ❖ BICEP experiment: JPL's bolometers trader

❖ To be kept in mind

- ❖ Compared to Planck?
- ❖ BICEP polarization maps
- ❖ E and B modes map
- ❖ Why?
- ❖ Angular power spectra
- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

- Very small telescope (20cm) = optimized for the sky's hole

- Only one frequency (150 GHz): cannot do component separation

Compared to Planck?

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy
- ❖ BICEP experiment: JPLS bolometers trader
- ❖ To be kept in mind
- ❖ Compared to Planck?
- ❖ BICEP polarization maps
- ❖ E and B modes map
- ❖ Why?
- ❖ Angular power spectra
- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

- Planck has a huge mirror 1.5m (full sky) + 9 frequencies

- And only 9 “old generation” polarization bolometers: sensitivity is **tenish times less**

BICEP polarization maps

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy
- ❖ BICEP experiment: JPL's bolometers trader
- ❖ To be kept in mind
- ❖ Compared to Planck?

❖ BICEP polarization maps

- ❖ E and B modes map
- ❖ Why?
- ❖ Angular power spectra
- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

● Stokes parameters

BICEP polarization maps

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy

- ❖ BICEP experiment: JPL's bolometers trader

- ❖ To be kept in mind

- ❖ Compared to Planck?

BICEP polarization maps

- ❖ E and B modes map

- ❖ Why?

- ❖ Angular power spectra

- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

Stokes parameters

E and B modes map

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy
- ❖ BICEP experiment: JPL's bolometers trader
- ❖ To be kept in mind
- ❖ Compared to Planck?
- ❖ BICEP polarization maps
- ❖ E and B modes map
- ❖ Why?
- ❖ Angular power spectra
- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

- E and B maps (divergence and curl polarization basis)

Every cosmologist got an orgasm because B is not vanishing on large scales

Why?

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy

- ❖ BICEP experiment: JPL's bolometers trader

- ❖ To be kept in mind

- ❖ Compared to Planck?

- ❖ BICEP polarization maps

- ❖ E and B modes map

Why?

- ❖ Angular power spectra

- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

- Because only gravitational waves and vector perturbations can make ionized matter in the cosmic plasma moving such as it generates a curly polarization

- Gravitational waves at that time can only come from inflation
- Vector perturbations at that time can only come from cosmic strings and/or modified gravity
- This is **new** physics: so, after the orgasm, serious cosmologists should be a bit skeptic

Angular power spectra

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy
- ❖ BICEP experiment: JPL's bolometers, trader
- ❖ To be kept in mind
- ❖ Compared to Planck?
- ❖ BICEP polarization maps
- ❖ E and B modes map
- ❖ Why?

❖ Angular power spectra

- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

- They match well with primordial gravitational waves

- Up to some funny points that would rather match cosmic strings

The likelihood is a bit funny...

BICEP2 results

- ❖ BICEP experiment: a “Get Lucky” strategy
- ❖ BICEP experiment: JPL's bolometers trader
- ❖ To be kept in mind
- ❖ Compared to Planck?
- ❖ BICEP polarization maps
- ❖ E and B modes map
- ❖ Why?
- ❖ Angular power spectra
- ❖ The likelihood is a bit funny...

Implication for slow-roll single field inflation

- Let's define r the tensor-to-scalar amount of **primordial super-Hubble** power
- Only the first four/five bins are consistent with GW

- That sounds like a bit of leakage from $T \rightarrow B$
- The first four bins are the most important and seem robust

BICEP2 results

Implication for slow-roll single field inflation

- ❖ Single field inflation
- ❖ CMB angular power spectra
- ❖ The primordial B contribution

● Slow-roll inflation predicts [arXiv:1303.2120, arXiv:1303.2788]

$$\begin{aligned}
 \mathcal{P}_\zeta = & \frac{H_*^2}{8\pi^2 M_{\text{Pl}}^2 \epsilon_{1*} c_{\text{S}*}} \left\{ 1 - 2(1+C)\epsilon_{1*} - C\epsilon_{2*} + (2+C)\delta_{1*} + \left(\frac{\pi^2}{2} - 3 + 2C + 2C^2 \right) \epsilon_{1*}^2 \right. \\
 & + \left(\frac{7\pi^2}{12} - 6 - C + C^2 \right) \epsilon_{1*}\epsilon_{2*} + \left(\frac{\pi^2}{8} - 1 + \frac{C^2}{2} \right) \epsilon_{2*}^2 + \left(\frac{\pi^2}{24} - \frac{C^2}{2} \right) \epsilon_{2*}\epsilon_{3*} \\
 & + \left(\frac{\pi^2}{8} - 1 + C + \frac{C^2}{2} \right) \delta_{1*}^2 + \left(-\frac{\pi^2}{24} + 2 + 2C + \frac{C^2}{2} \right) \delta_{1*}\delta_{2*} + \left(-\frac{\pi^2}{2} + 4 - 3C - 2C^2 \right) \delta_{1*}\epsilon_{1*} \\
 & + \left(-\frac{\pi^2}{4} + 3 - C - C^2 \right) \delta_{1*}\epsilon_{2*} + \left[-2\epsilon_{1*} - \epsilon_{2*} + \delta_{1*} + (2+4C)\epsilon_{1*}^2 \right. \\
 & + (-1+2C)\epsilon_{1*}\epsilon_{2*} + C\epsilon_{2*}^2 - C\epsilon_{2*}\epsilon_{3*} + (1+C)\delta_{1*}^2 + (2+C)\delta_{1*}\delta_{2*} - (3+4C)\delta_{1*}\epsilon_{1*} \\
 & \left. - (1+2C)\delta_{1*}\epsilon_{2*} \right] \ln \left(\frac{k}{k_*} \right) \\
 & + \left[2\epsilon_{1*}^2 + \epsilon_{1*}\epsilon_{2*} + \frac{1}{2}\epsilon_{2*}^2 - \frac{1}{2}\epsilon_{2*}\epsilon_{3*} + \frac{1}{2}\delta_{1*}^2 + \frac{1}{2}\delta_{1*}\delta_{2*} - 2\delta_{1*}\epsilon_{1*} - \delta_{1*}\epsilon_{2*} \right] \ln^2 \left(\frac{k}{k_*} \right) \Big\}, \\
 \mathcal{P}_h = & \frac{2H_*^2}{\pi^2 M_{\text{Pl}}^2} \left\{ 1 - 2(1+C - \ln c_{\text{S}*})\epsilon_{1*} + \left[-3 + \frac{\pi^2}{2} + 2C + 2C^2 + 2\ln^2 c_{\text{S}*} - 2(1+2C)\ln c_{\text{S}*} \right] \epsilon_{1*}^2 \right. \\
 & + \left[-2 + \frac{\pi^2}{12} - 2C - C^2 + 2(1+C)\ln c_{\text{S}*} - \ln^2 c_{\text{S}*} \right] \epsilon_{1*}\epsilon_{2*} + \left[-2\epsilon_{1*} + (2+4C - 4\ln c_{\text{S}*})\epsilon_{1*}^2 \right. \\
 & \left. + (-2 - 2C + 2\ln c_{\text{S}*})\epsilon_{1*}\epsilon_{2*} \right] \ln \left(\frac{k_*}{k} \right) + (2\epsilon_{1*}^2 - \epsilon_{1*}\epsilon_{1*}) \ln^2 \left(\frac{k_*}{k} \right) \Big\}
 \end{aligned}$$

● Model dependence is only through H_* , ϵ_{i*} ...
