## The CMS cosmic experience, and plans for 2009

*Thursday, 22 January 2009 10:30 (45 minutes)*

After the deception following the LHC incident on September 19th, the CMS collaboration went through an important challenge by collecting cosmic data for four weeks. Nearly 300 millions cosmic events were collected using the full detector at the nominal magnetic field of 3.8T. Lessons and results from that exercise will be presented together with preliminary plans for 2009.
